Motivation

Financial Performance Measures in Executive Bonus Plans

Motivation

Financial Performance Measures in Executive Bonus Plans

“Income statement” measures

- **EBITDA**
- **EBIT**
- **EBT**
- **Net income**
- **Sales**
- **Cash flow**
- **Stock price**
- **Other**

Motivation

- Most variation in performance measure choice is *within* the income statement
- What explains these *ex ante* performance measure choices?
- We examine agency-theoretic predictions on the role of “cost shielding”
 - The primary distinction between different income statement measures is the extent to which they exclude various expenses

Cost Shielding

More cost shielding

Net income = Sales minus Expenses

EBT = Net income *excluding tax expense*

EBIT = EBT *excluding interest expense*

EBITDA = EBIT *excluding depreciation*

Sales *excludes all expenses*

Cost Shielding

Macy's 2017 proxy:

“The [compensation committee] selected EBIT as the performance metric to ensure that the maximum potential payout is determined as a percentage of controllable profit.

Excluding interest and taxes ensures that profit is defined based on operating results that the Named Executives can directly influence.”

Primary Questions

- Do boards use cost shielding to improve contracting efficiency and resolve issues with:
 1. Noisy costs?
 - Incentive contracts should place relatively smaller weights on noisier performance measures (Banker and Datar, 1989; Lambert, 2001)
 - Helps validate our empirical cost shielding measures
 2. Temporal mismatches between costs and benefits of investments?
 - Performance measures that include investment-related expenses can encourage myopic behavior (e.g., Stein, 1989)
 3. Costs resulting from previous management's actions?
 - Executives should be evaluated on measures that are informative about their actions (e.g., Holmström, 1979; Antle and Demski, 1988)

Main Findings

- Noisy costs:
 - We find more cost shielding when expenses are more volatile
- Temporal mismatches between costs and benefits:
 - We find more cost shielding for firms with more growth opportunities/focus on new product launches
- Costs resulting from previous management's actions:
 - We find cost shielding decreases with executive tenure

Measuring Cost Shielding

- We create a categorical variable for each performance measure within a given firm-year:
 - Net income = 0
 - EBIT = 1
 - EBITDA = 2
 - Sales = 3
- Our summary cost shielding measure (*Cost Shield*) is the firm-year mean of these categorical variables.
 - Firm using only net income: *Cost Shield* = 0
 - Firm using only sales: *Cost Shield* = 3
 - Firm using sales and net income: *Cost Shield* = 1.5

Research Design

$$\begin{aligned} \text{Cost Shield}_{i,t} = & \alpha + \beta_1 \text{Contracting Value}_{i,t-1} + \beta_2 \text{Ln}(MVE)_{i,t-1} + \beta_3 \text{Idio Vol}_{i,t-1} \\ & + \beta_4 \text{BTM}_{i,t-1} + \beta_5 \text{Free Cash Flow}_{i,t-1} + \beta_6 \text{Ln}(\text{Delta})_{i,t-1} + \beta_7 \text{Ln}(\text{Tenure})_{i,t} \\ & + \delta_t + \varepsilon_{i,t}, \end{aligned} \tag{1}$$

$$\begin{aligned} \text{Measure}_{i,t} = & \alpha + \beta_1 \text{Contracting Value}_{i,t-1} + \beta_2 \text{Ln}(MVE)_{i,t-1} + \beta_3 \text{Idio Vol}_{i,t-1} \\ & + \beta_4 \text{BTM}_{i,t-1} + \beta_5 \text{Free Cash Flow}_{i,t-1} + \beta_6 \text{Ln}(\text{Delta})_{i,t-1} + \beta_7 \text{Ln}(\text{Tenure})_{i,t} \\ & + \Gamma \text{Other Measures}_{i,t} + \delta_t + \varepsilon_{i,t}, \end{aligned} \tag{2}$$

- Contracting value measures:
 - Noisy costs: Volatility of depreciation, R&D, interest, and effective tax rate (ETR)
 - Temporal mismatches between costs and benefits: Sales growth, book-to-market, % of new products, firm age
 - Costs from previous management: Executive tenure, turnover

Noisy Costs

Additional Analyses

- CEO turnover as a “shock” to contracting value
- Role of the board’s financial expertise
- Robustness tests and alternative variable construction

CEO Turnover

- We examine two complementary CEO turnover settings:
 1. We hand-collect data on CEO turnover due to death or health-related reasons
 - Likely unrelated to firm/manager characteristics that influence bonus plan design (plausibly “exogenous”)
 2. We examine forced CEO turnover (Peters and Wagner, 2014)
 - Suggests board has rejected the previous CEO’s actions and the incoming CEO may require greater cost shielding
- We find significant increases in cost shielding following both types of turnover

Financial Expertise

- We examine whether our results differ between boards with relatively high and low financial expertise
- Findings for *noisy costs* and *controllability* are more pronounced among boards with greater financial expertise
 - Results primarily from substitution between different earnings-based measures
- Findings for temporal mismatches of costs and benefits *do not differ* based on financial expertise
 - Results primarily from inclusion of sales measures

Robustness Tests

- Our inferences are unchanged if we:
 - Define *Cost Shield* based on other firm-year summary measures than the mean (e.g., median, max)
 - Define *Cost Shield* using actual weights on individual performance measures
 - For example, for a bonus based 75% on sales (3) and 25% on net income (0), $Cost\ Shield = 75\% \times 3 + 25\% \times 0 = 2.25$
 - Exclude loss firms
 - Include fixed effects for number of performance measures
 - Examine the firm's lowest-paid NEO, rather than the CEO
- Collectively, these results suggest our findings are not an artifact of specific research design choices

Summary

- We show substantial heterogeneity in performance metrics within “earnings-based” pay
- We provide evidence that boards use bonus plans to focus executives’ attention on specific, more controllable objectives
- Boards appear to recognize the limitations/deficiencies of specific income statement measures and design bonus plans accordingly
- Our findings highlight an unexplored benefit of directors’ financial expertise

Thank you!

Sample

- Incentive Lab
 - Annual cash incentive plans
 - Sample period: 2006-2017
 - 8009 firm-years, 1442 distinct firms
- Other firm-level data:
 - Financial (Compustat)
 - Stock returns (CRSP)
 - Compensation/tenure (Execucomp)
 - New/existing products (Factset)
